**CAB® Bosserman Clips**

## Advantages of Bosserman Clips

1. Corrosion and rust problems are virtually eliminated due to the heavy plastisol coating over the entire metal surface of the Bosserman Clip. This rustproofing protection will outlast other typical methods of rustproofing and will result in significant cost savings and improved safety.
2. Slippage of hangers on the messenger wire is no longer a problem due to the slip resistance of the plastisol in the attachment section of the clip. Uniform spacing of hangers without this slippage will keep wires more safely up and out of the way.
3. High dielectric grade plastisol applied on 100% of the hanger surface makes the Bosserman Clip totally insulated and spark resistant. Provides for maximum safety in the suspension of electric cables and wiring in all underground applications.
4. Extra Long Styles available for running 2 cables separately from 1 messenger wire or large bundles of cables. Also available with 1" (25mm) wide saddles in the cable carrying section for extra support of cables.

## CAB MRS Collapsible Hangers

MRS Hanger  
CAB 6698

### CAB MRS Collapsible Hangers

are designed to hang cables when mining with mobile roof supports. For improved safety, bottom two carriers of hanger collapse, allowing cables to drop to floor of mine when tension is applied. Top loop retains hanger in mine roof after bottom carriers release. This allows miners to remove cables from hangers without entering unsupported roof hazard areas. Each carrier has a safe working load of 22 pounds (10.0kg). Equally loaded, each carrier will drop cables with a weight load or tension equivalent of 70-90 lbs. (31.8-40.9kg) Made from .187 (4.7mm) low tensile strength wire, 5/8" (16mm) diameter top loop, 2-1/2" (64mm) diameter bottom carriers.

# CAB® Cable Rings & Saddles

**Industry Favorite for Safe, Strong Support of Aerial Cables**

CAB Cable Rings provide maximum strength and safety for the support of all types of aerial cables. Rings are manufactured from galvanized steel, copper clad steel or type 316 stainless steel to withstand the most corrosive environments. For added safety and protection, any style ring can be totally insulated with a tough, 80 mil (2mm) coating of high dielectric grade PVC plastisol.

**CAB PVC coated Rings and Saddles are extremely resistant to corrosion and act as a mini-cable tray system for cables.**

For maximum strength, CAB Cable Rings are manufactured from high tensile spring steel in rolled flat wire form. This high quality material provides a smooth, flat surface for the support of cables and rounded edges for the protection of cable jackets. This advanced roll-form design, combined with the strong spring temper of the wire, provides a tight, secure attachment of the cable ring to the messenger wire.

**CAB Cable Ring Saddles provide a 1" wide load-bearing area for extra support and protection of cables.**

CAB Cable Rings are manufactured in standard, medium and long styles. Designed to tightly fit on an exact messenger wire size to prevent slippage. Medium and long style rings have extra length for bundles of cables or for running several cables independently from same messenger wire. Recommended spacing for ring sizes 1-1/2" through 2-1/2" (38mm through 64mm) is 15" to 20" (381mm to 508mm). Recommended spacing for ring sizes 3" through 6" (76mm through 152mm) is 12" to 15" (305mm to 381mm). Exact spacing varies depending on type of cable, nature of installation and loading requirements. When ordering cable rings, specify size, material, style and size of messenger strand.

**CAB Rings are recommended for aerial cables in plants, mills, tunnels, open pit mines and pipeline projects.**

**CAB's Award Winning PVC coated Rings and Saddles have a heavy coating of high dielectric grade, UV stabilized PVC plastisol.**

**Cables can be run separately by using CAB's standard and long style rings.**

# CAB® LIFELINE

*Leading the Way to Safety Since 1985*

**CAB Lifeline features large, heavy duty solid cones for maximum strength, safety and durability. Pictured here with aircraft cable Lifeline.**

## **CAB Directional Indicators**

CAB directional indicators are molded in a large, heavy duty solid cone. The cone size and shape is specifically designed to quickly identify proper direction of travel and to prevent a handgrip from being broken when in actual use. CAB Lifeline is hand constructed under rigid quality control by feeding Lifeline through the center of all cones, which are then firmly attached to the Lifeline with aircraft cable hardware. This prevents directional cones from being dislodged, tampered with or removed from the Lifeline. Other lifelines on the market use small cones that make it hard to tell proper direction of travel or cones that easily unsnap and fall off, even in normal use.

## **CAB Color Coded Directional Indicator Cones**

CAB directional cones have 6 reflective bands for high visibility. All cones are securely fastened to Lifeline with aircraft cable hardware. Cannot be accidentally dislodged or removed. Reflective bands available on entire surface or tapered surface only.

**CAB Extra High Visibility Lifeline is easily seen from any direction in escapeways. Lifeline markers hang vertically so they can be seen for long distances up and down escapeways. Markers are flexible so miners' hands can slide easily over them.**

## **CAB Lifeline in Standard and Extra High Visibility Styles**

CAB Standard Lifeline has 2" (51mm) wide reflective bands applied at 25 foot (7.6m) intervals between cones.

CAB Extra High Visibility Lifeline meets increasing safety standards with 2" x 4" (51mm x 102mm) or 2" x 8" (51mm x 203mm) reflective markers installed at 25 foot (7.6m) intervals between cones.

All CAB markers hang vertically and are easily seen from any direction in the escapeway. Because of their firm attachment to the Lifeline with aluminum stop sleeves, they stay oriented to show proper direction of escape at all times. Can be 1 or 2-sided in the same or different colors.

CAB's sturdy, retroreflective vinyl markers are the most brilliant on the market. They won't crack, shatter or fall off the Lifeline as other hard plastic reflectors do.

**CAB Markers available in double length, extra high visibility style, as pictured above.**

## **Now for longwall operations... Interchangeable Velcro Markers**

CAB Lifeline with Velcro Markers is designed for mines that change color of Lifeline after longwall operations.

Made from strong polypropylene webbing with velcro on one side. High visibility 2" x 6" (51mm x 152mm) reflective markers with velcro backer (sold separately) are quick and easy to attach and change later to another color as mining progresses and escape routes change.

## Highest Quality Construction and Advanced Safety Features

**CAB Extra High Visibility Lifeline features the most brilliant reflective markers in the industry. Markers are firmly attached to Lifeline and can't break or fall off like other reflectors. Available in rope and heavy duty aircraft style. Lifeline Hangers are shown on page 13.**

### Hand Crafted to Rigid Quality Standards

CAB Lifeline is available in rope and heavy duty aircraft cable styles. Lifeline sections quickly and securely lock together with heavy duty aircraft cable oval sleeves, thimbles and quick links. CAB Rope Lifeline is manufactured from 1/4" (6.4mm) diameter, yellow, flame retardant polypropylene rope. Available in 300' (91.4m) and 1,000' (304.8m) spools.

### CAB Tie-On Markers

CAB Tie-On Markers can be easily added to existing Lifeline. Made from 2" x 4" (51mm x 102mm) brilliant retroreflective vinyl. Stitched on all sides. Strong nylon cord is sewn into top hem for securely tying markers to Lifeline.

### CAB Spiral Coil Rumble Strips

Used on branch lines that lead to refuge alternative. Strips measure 2" x 8" (51mm x 203mm) and are easily threaded into strands of existing Rope Lifeline or can be attached with cable ties to Aircraft Cable or Rope Lifeline.

### High Quality Construction and Spooling for Quick and Easy Installation

CAB Lifeline requires no assembly and is ready to install. All parts are integral and securely attached with aircraft cable hardware. Lower in overall cost compared to other brands that require stocking of parts and extra labor for assembly.

**See page 13 for Lifeline Hangers.**

CAB Heavy Duty Aircraft Cable Lifeline (patent pending) is much more durable, especially in case of mine fires, explosions or rock falls. Made from strong 3/16" (5mm) diameter plastic coated, galvanized aircraft cable for maximum durability and safety. Sold in 300' (91.4m) spools.

### CAB Split Cones

Identical to standard cones except featuring a pre-engineered hole and slit on one side for easy and secure attachment to previously installed Lifeline. Use two cones on main Lifeline to mark all branch lines. Use four cones, forming two diamond shapes on branch lines, to indicate SCSR storage caches. Sold in kits of 10 cones and 20 stop sleeves.

### CAB Lifeline Balls

CAB Balls are used for marking location of mine personnel doors. Solid and durable, yet lightweight. Firm, secure attachment features a pre-engineered hole and slit on one side for quick, easy installation. Sold in kits of 10 balls and 20 stop sleeves.

**CAB Cones and Balls are tough, durable and stay securely attached to Lifeline.**
